Molded notch construction is available in lengths under 3,000mm only.

**Micro-V® Belts** Available in A, B, C and D sections.

**Hi-Power® II PowerBand® Belts**

Molded Notch belts use the same system of size and length designation as individual belts. Over or jumping off the sheave problems associated with heavily shock loaded drives using individual belts. PowerBand belts take advantage of a distinctive molded notch configuration. Using a single belt may replace three belts on open belts.
